

Astronomy and Astrophysics: An Introductory Survey

A lecture series by the Astronomical Society of India

ASI is delighted to announce a comprehensive lecture-series by Professor G. Srinivasan (Srini) as part of its Golden Jubilee celebrations. Srini is renowned as much for his masterful teaching as for his research contributions. Undergraduate and graduate students of Physics or Engineering will greatly benefit from this excellent introduction to contemporary astronomy which starts from first principles and builds up to the present state of our understanding.

Estd. 1972

Professor G. Srinivasan

In a research career spanning more than five decades, his interests have spanned many aspects of physics and astrophysics. He is a passionate teacher and has authored two outstanding Astronomy texts titled 'What Are The Stars?' and 'Can Stars Find Peace?' He is a Past President of the Astronomical Society of India, and a Past President of the Division on Space and High Energy Astrophysics of the International Astronomical Union.

In his distinguished career he has worked at the University of Chicago, USA; the IBM Research Laboratory in Zurich, Switzerland; Chalmers University of Technology, Goteborg, Sweden; the Cavendish Laboratory, University of Cambridge, England and the Raman Research Institute, Bangalore.
